

Introducing PowerPick Multi

Eliminate changeovers and manual handling errors!

❑ **Product launch alert!** Tired of swapping gripper setups like it's a relay race? Say hello to PowerPick Multi—the only gripper you need for flexible, changeover-free palletizing. ❑

- ❑ No more manual handling errors
- ❑ No more bottlenecks
- ❑ No more “Oops, wrong gripper set up” moments

Handle any box size, multi-pick scenarios, and future production changes with zero headaches. It's productivity, adaptability, and ease of use—all in one smart package.

Stop adjusting to limitations—let your gripper adjust to you.

C³ Compact Curve Conveyor

Maintains positioning accuracy through turns

Designed with a low-profile frame, the [C3 brings innovation to belted conveyor systems](#) with a patented curved belt and drive system. This unique construction offers smooth curves for delicate materials and products while maintaining positioning accuracy through turns, and small pulleys ensure smooth transfers for products as small as 2 inches.

Unlike traditional 90° transfers, the C³ conveyor keeps the leading edge consistent through the curve to ensure products are correctly positioned for the next step down the processing line. The simplified configuration also eliminates the need for straight infeed and outfeed conveyors, which are required in modular belted curves.

Power Up with Electric Automation

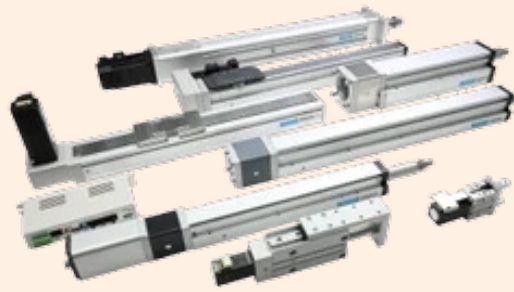

Seamless connectivity, just plug and work!

Take advantage of one of the most extensive product portfolios with a wide variety of linear and rotary mechanical systems, servo drives and motors, as well as control solutions and I/O systems. Always complemented by a varied and open range of communication options for seamless automation solutions.

[Festo's Simplified Motion Series](#) provides you

with an automation solution that bridges the gap between easy-to-install pneumatics and smart electric automation. Simply make your production more efficient with plug and work.

Rugged Graphite® Operator Panels **With plug-in I/O module capability**

Red Lion's rugged Graphite® operator panels are the industry's first HMI touchscreens to combine rugged all-aluminum construction with an I/O module architecture. All of the Graphite HMI models offer drag-and-drop protocol conversion, data logging and web-based monitoring and control.

Available in eight different sizes ranging from 7 to 15 inch, Graphite HMIs feature sleek full-color touchscreens in a streamlined, compact footprint for easy installation. A wide variety of expansion modules seamlessly extend capabilities and address varying requirements.
